FIRST RUN
User is presented with the
Register via email option or to
Remind him later

SKIP REGISTRATION
User is reminded they can still register the product in the Settings menu

Register Later

You can register PromptSmart by tapping on the Settings menu.

OK

ENTER EMAIL ADDRESS
User is told about registration and can enter email address (will use iOS Email keyboard).
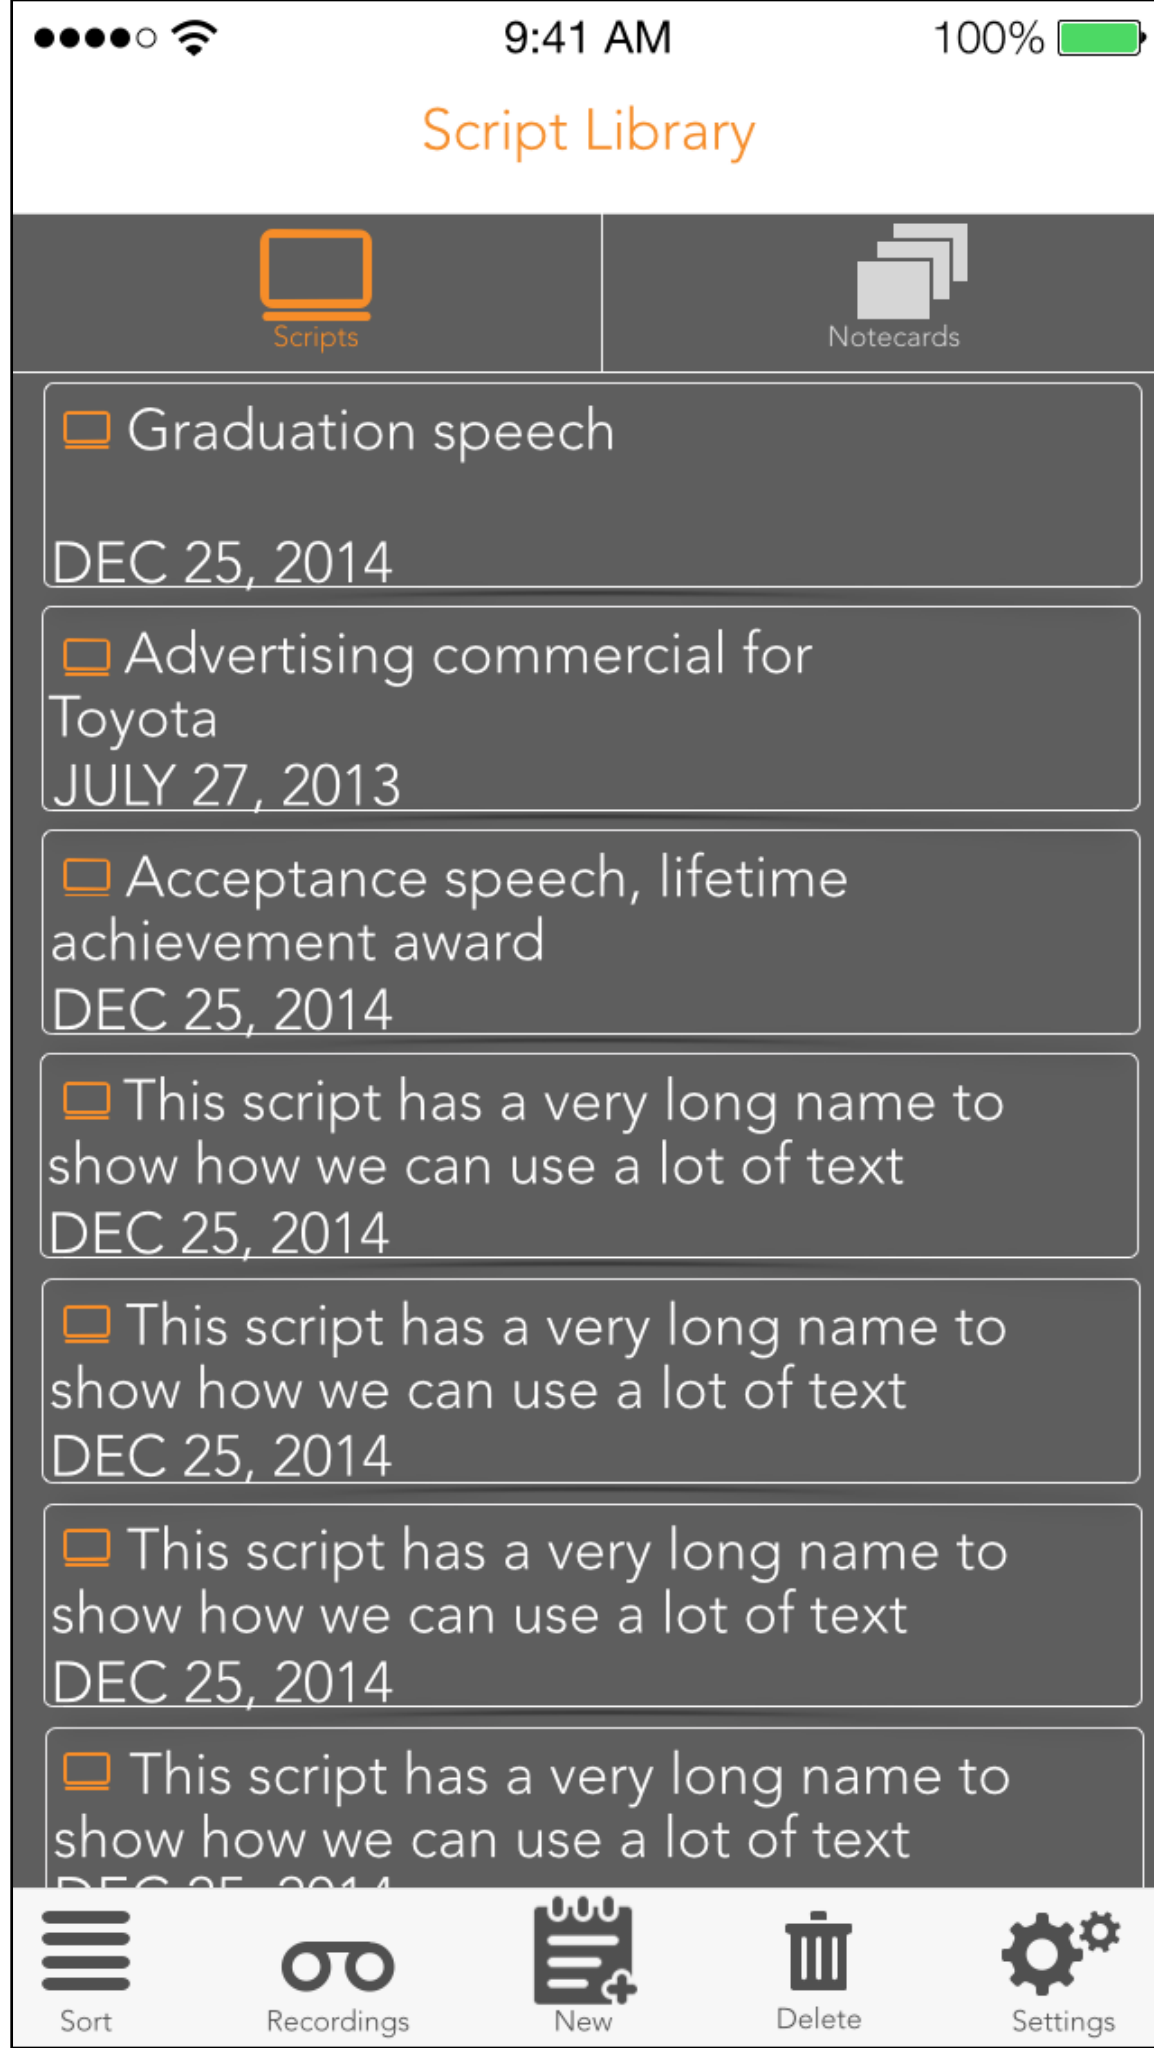

Remind me later label/button will act as a "Skip" in this screen.

BLANK SLATE

When either the Scripts or Notecards section is empty, it will have this simple reminder on where to tap to import a script/notecard or create a new script/notecard

At the top are two tabs, one for Scripts, one for Notecards. The two views share the same lower menu.

SCRIPT LIBRARY

This is the Script library.
Tapping on a script will take you to the individual script view.

From this view you can sort, view recordings, create a new script, do bulk deletion and access the settings menu.
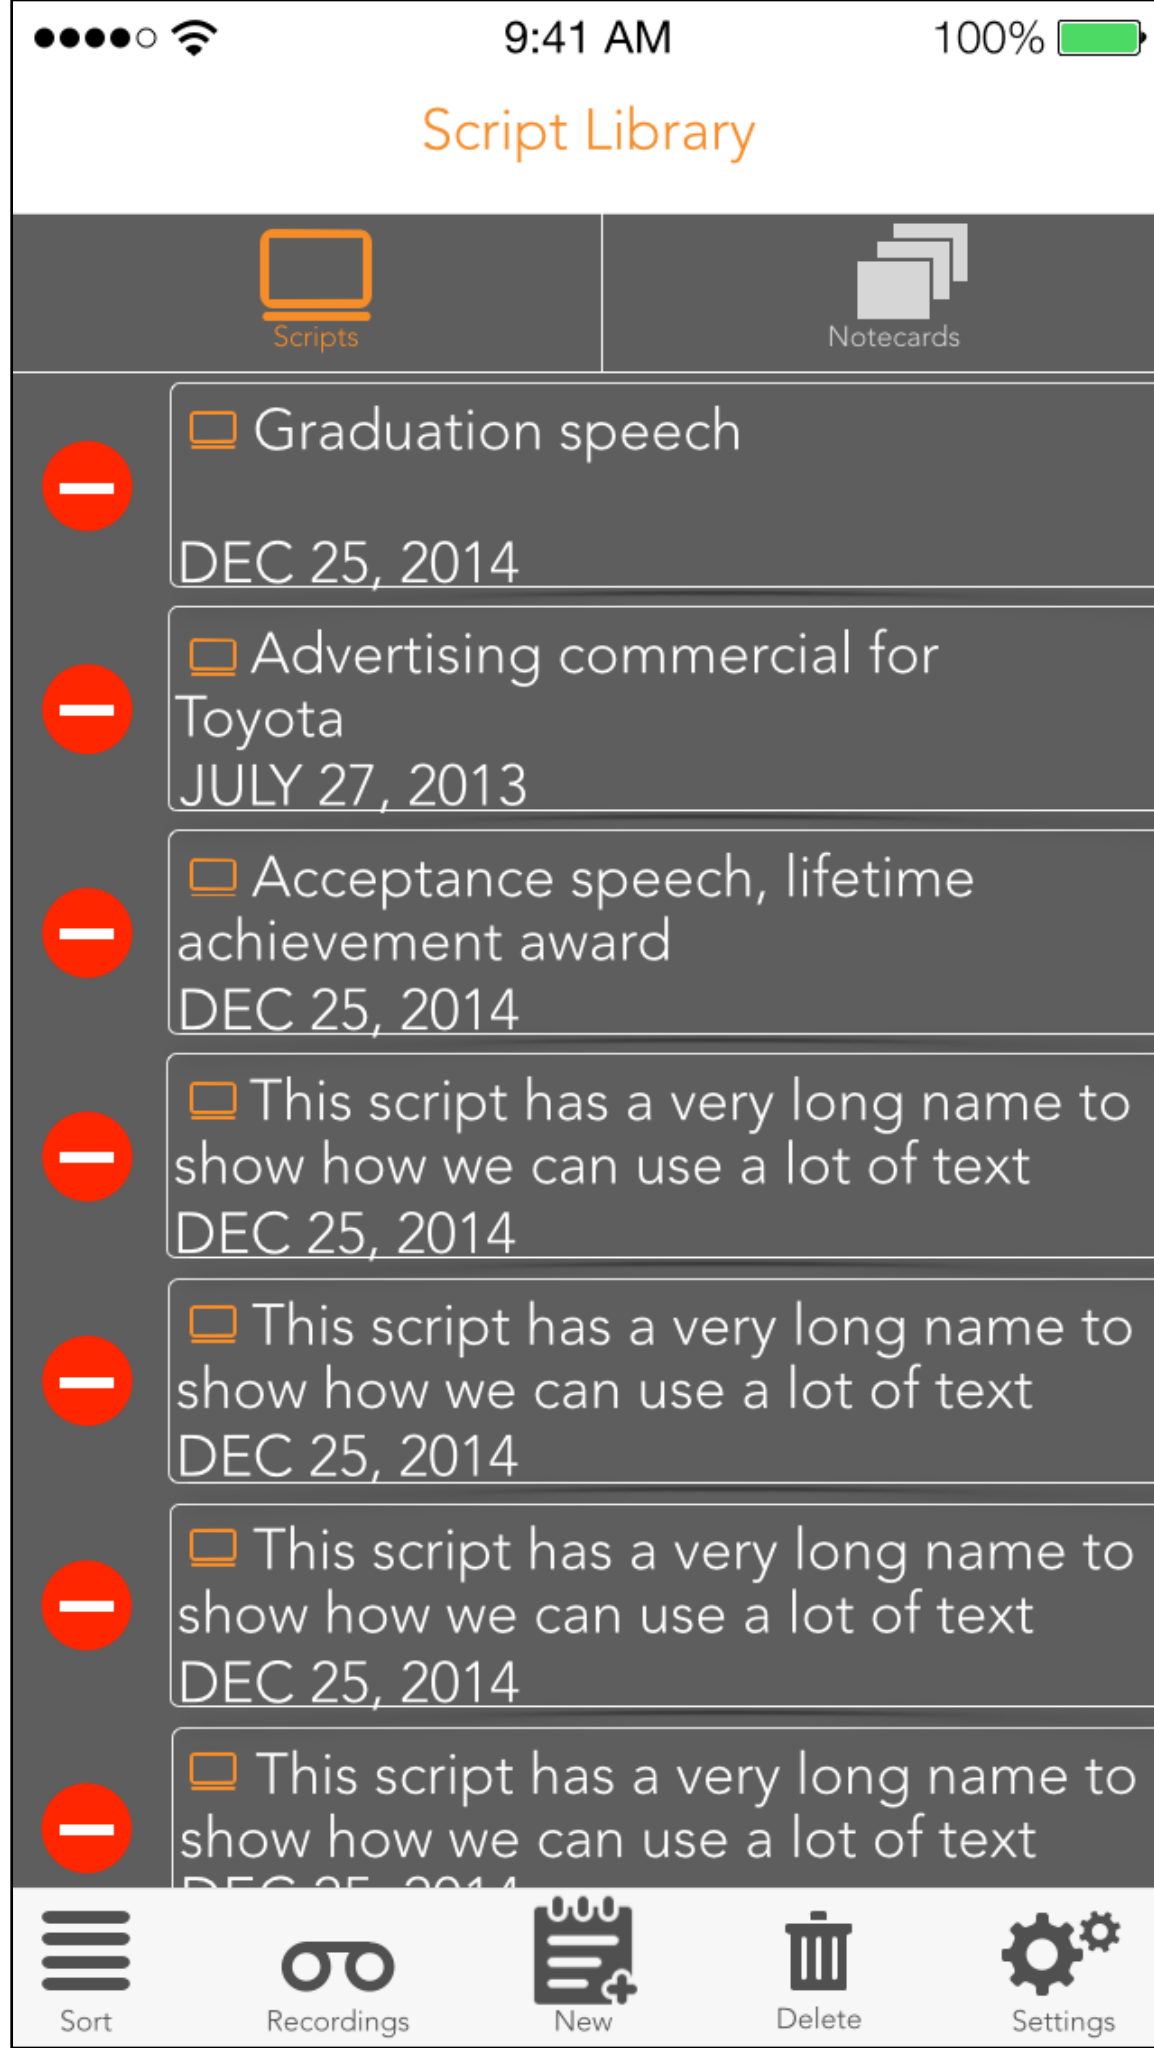

NOTECARD LIBRARY
Just like the Scripts, this is a list of all the Notecards, sorted A to Z, or Z to A or last date edited.
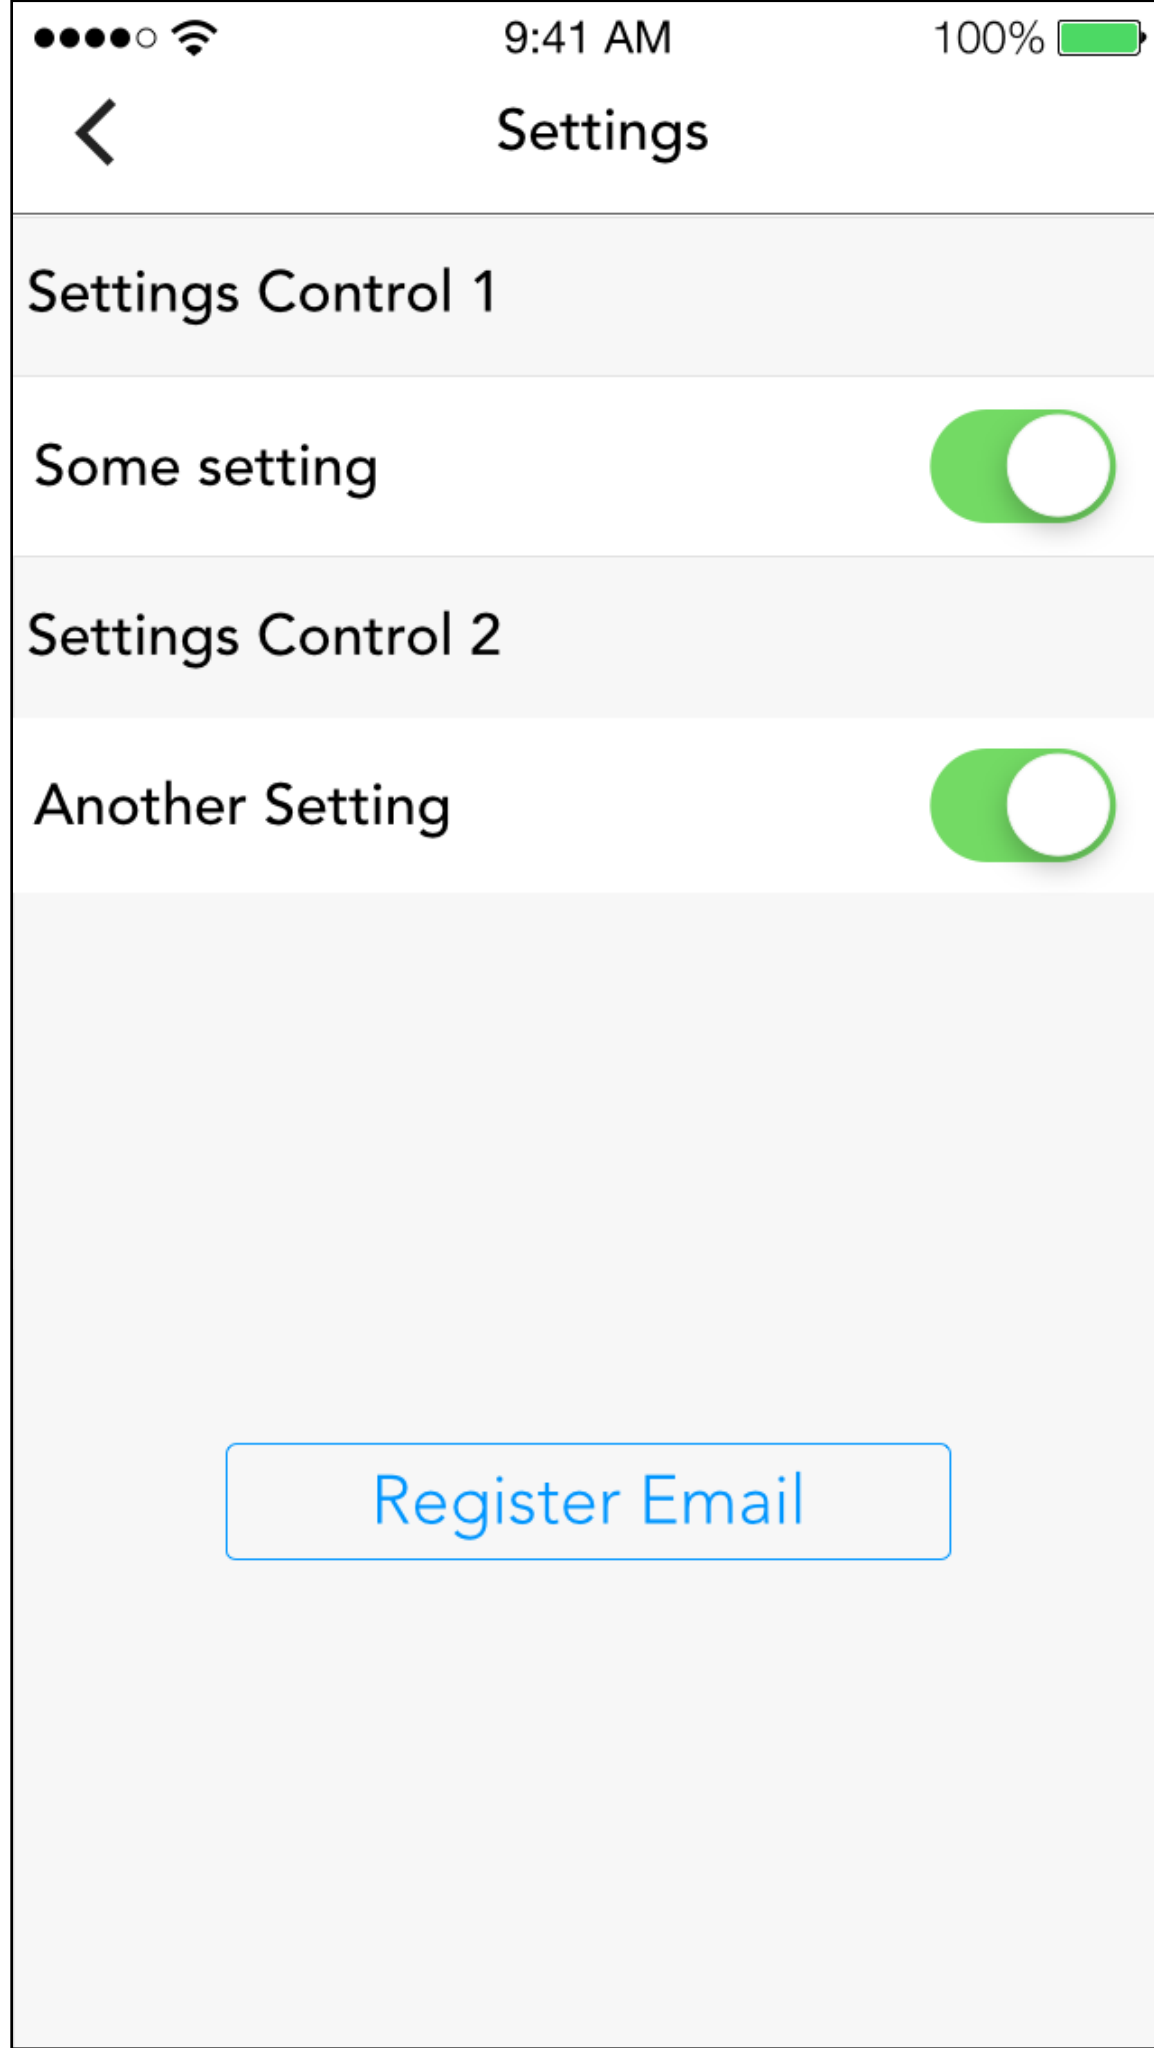

SCRIPT & NOTECARD OPTIONS

With a swipe from the Right to the Left on a Script will slide the list item to the right, and shows options to share or delete the Script or Notecard.

BULK DELETE SCRIPTS
Pressing on the Delete button at the bottom will move the app into Bulk Delete mode, tapping on a red circle will have the element slide to the Left to be deleted.

SETTINGS SCREEN

The Settings Screen will contain several controls. Settings are TBD.

You can also register your email from The Setting Screen.

SORT SCRIPTS/NOTECARDS
Tapping on the Sort item will bring up a dial to select a sort method.

9:41 AM   100% ▮

<   Title of the script goes…

This is the text of the script, right now it is not editable but it will continue in this box until it fills the entire box.

The rest of this text is just filler to illustrate how much preview text will appear when you view a script.

Lorem ipsum dolor sit amet, consectetur adipiscing elit. Donec sed purus quam. Nam posuere congue nibh, in pulvinar orci rhoncus nec. Donec ut venenatis tortor. Etiam sit amet sapien vulputate, scelerisque quam fringilla, pellentesque nulla.

Etiam pharetra leo quis ipsum pharetra, dictum consectetur mauris lobortis. Sed feugiat congue orci a porta. Mauris blandit nisi eu congue fermentum. Donec blandit urna vel justo tincidunt, ac scelerisque magna sodales. Nullam molestie mollis cursus. Suspendisse potenti.
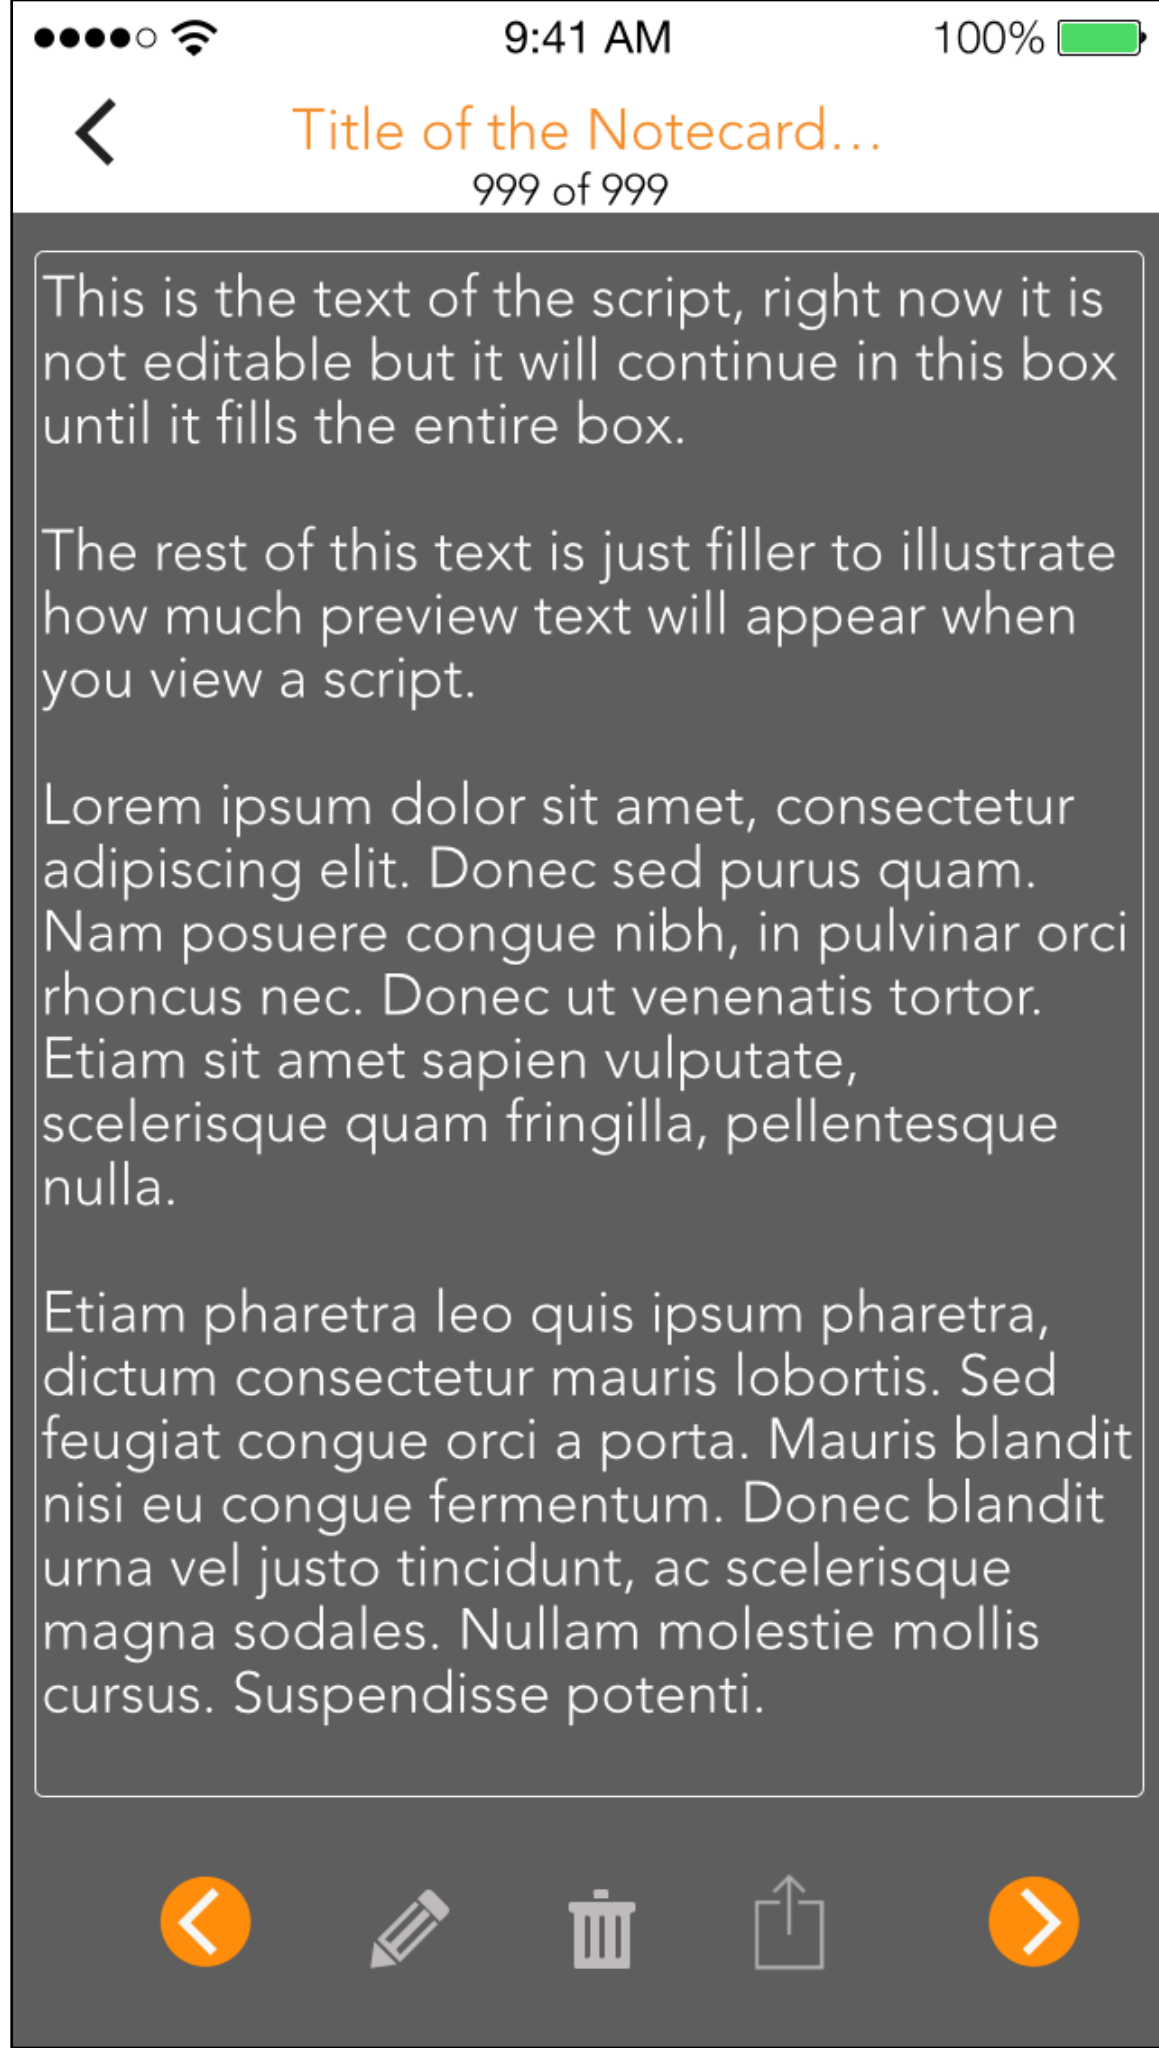

✏   Aa   ▶   ◔   ⬆

VIEW A SCRIPT
This is the full view of a script that was either imported or typed on the device. The Pencil Icon will let you edit it. The Aa button will let you adjust the size of the display text. The Play button will start the Prompt session. The Speedometer will let you adjust the scrolling speed of the Prompter. The Share button will let you share the script.
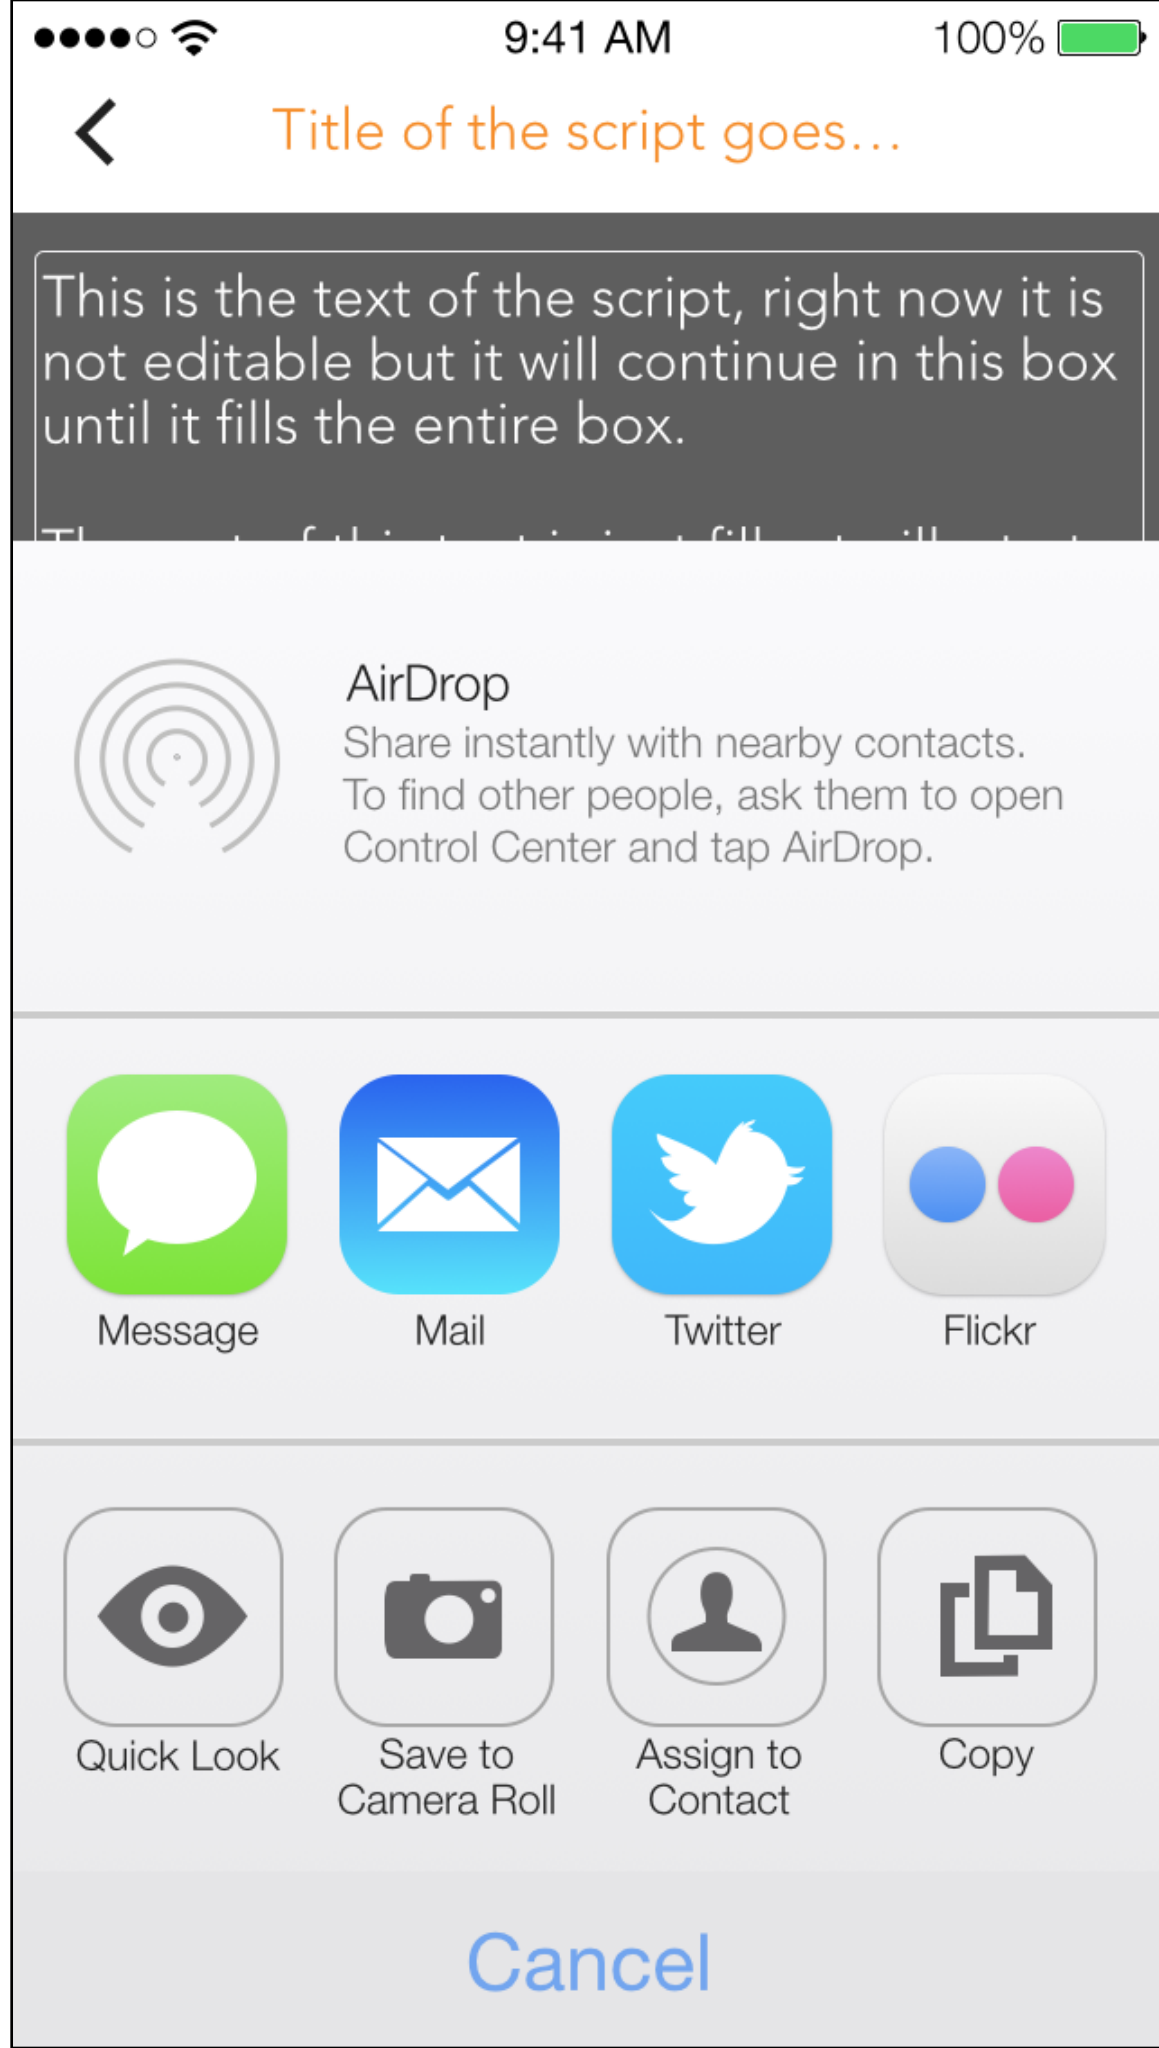

SHARE A SCRIPT
The Share button pulls up the iOS Share panel.

Note, this is the default share configuration, I'm not suggesting we share Scripts on Flickr, etc… Once we have the Share panel working, we will determine which share options are ideal for Scripts.

This is the text of the script, right now it is not editable but it will continue in this box until it fills the entire box.

The rest of this text is just filler to illustrate how much preview text will appear when you view a script.

Lorem ipsum dolor sit amet, consectetur adipiscing elit. Donec sed purus quam. Nam posuere congue nibh, in pulvinar orci rhoncus nec. Donec ut venenatis tortor. Etiam sit amet sapien vulputate, scelerisque quam fringilla, pellentesque nulla.

Etiam pharetra leo quis ipsum pharetra, dictum consectetur mauris lobortis. Sed feugiat congue orci a porta. Mauris blandit nisi eu congue fermentum. Donec blandit urna vel justo tincidunt, ac scelerisque magna sodales. Nullam molestie mollis cursus. Suspendisse potenti.

PR█MPTSMART

VIEW A NOTECARD
This is the full view of the notecard.

This view can contain a lot of text. I 'd like to look into larger text sizes by default (RTF will allow for many sizes).

Left and Right buttons cycle through the cards.
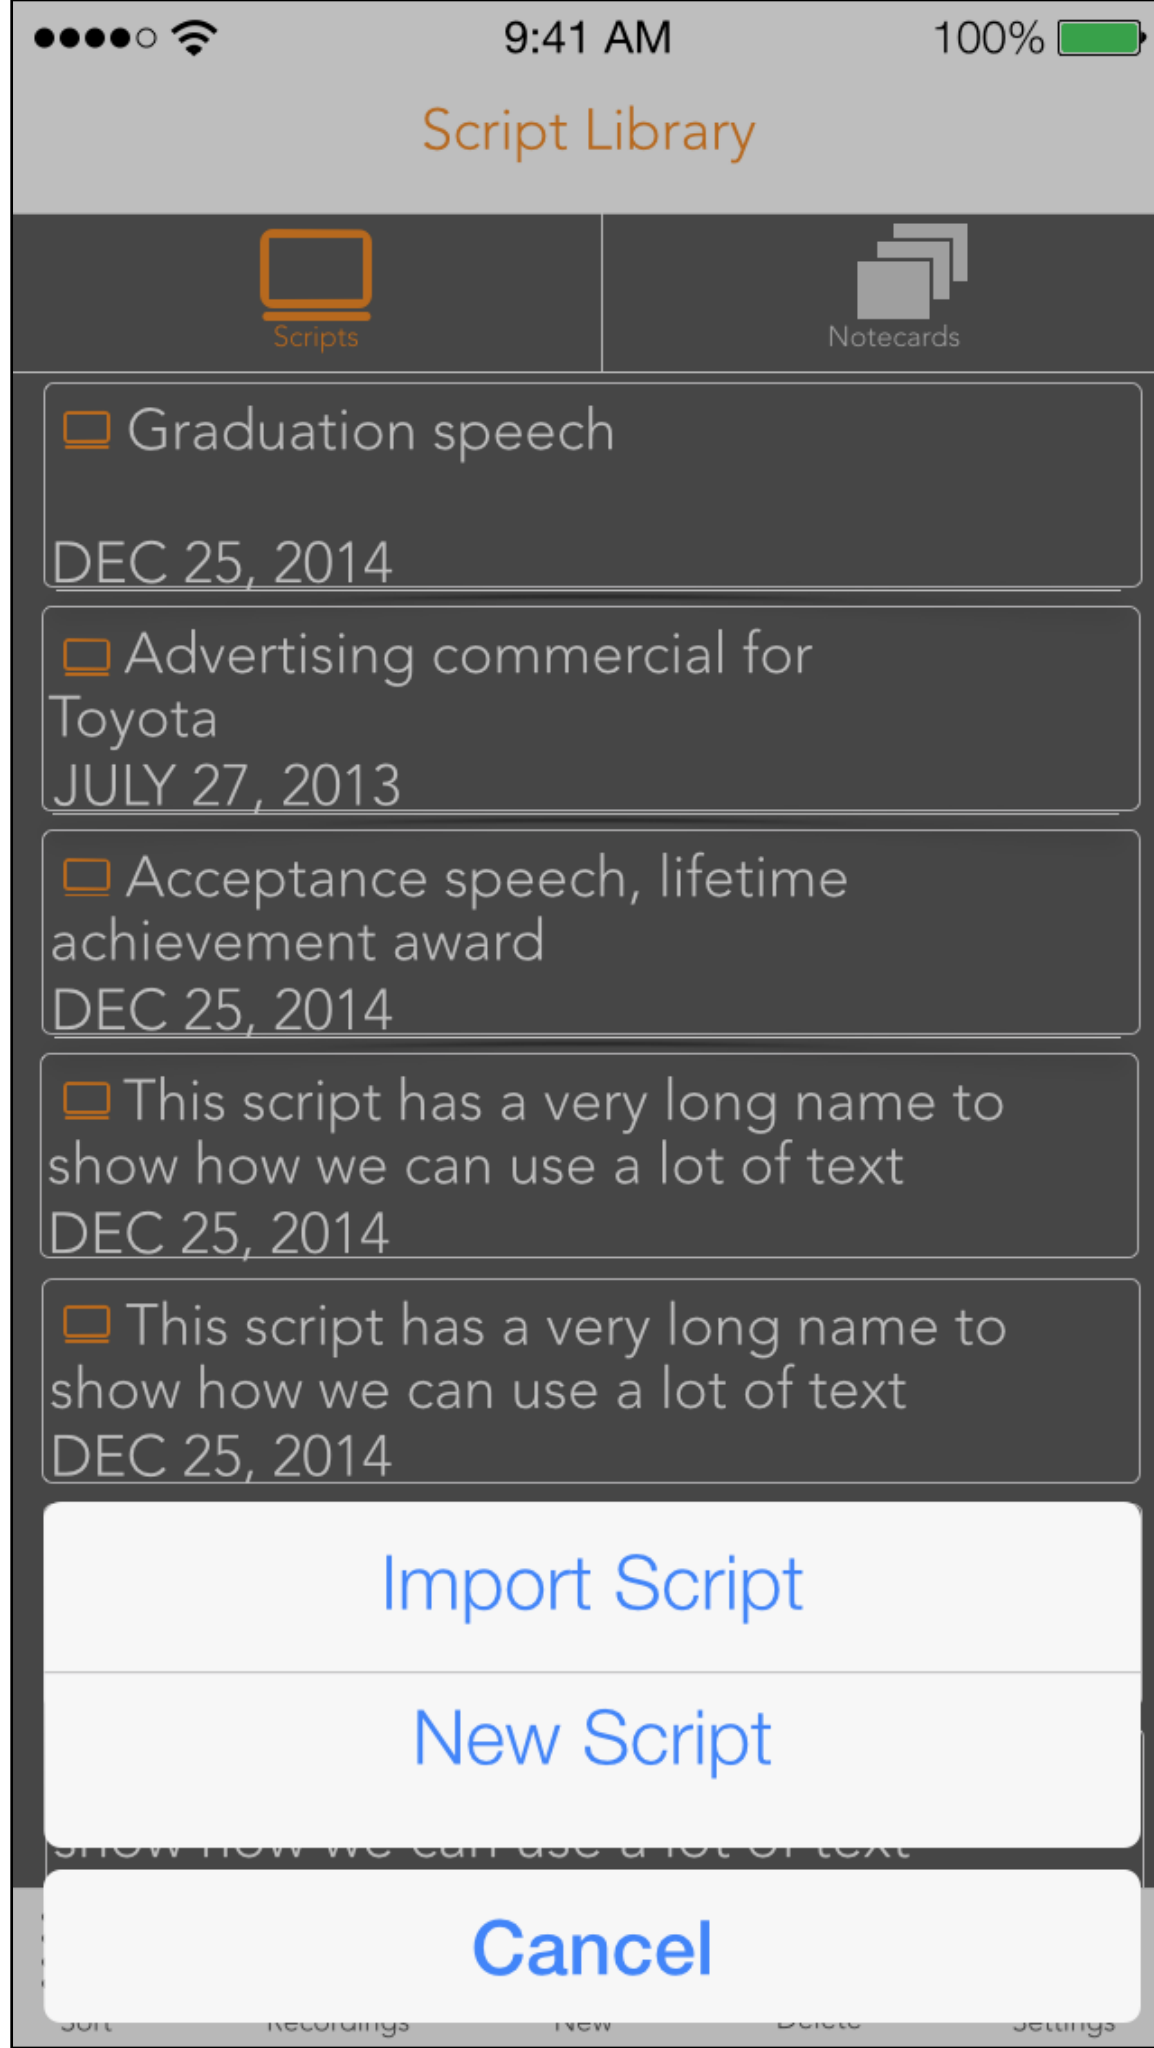

NEW SCRIPT
Tapping on the New Script icon begins the process of creating or importing a new script. The user must choose to import from a file (Starting the Ink File Picker) or creating a new blank script.
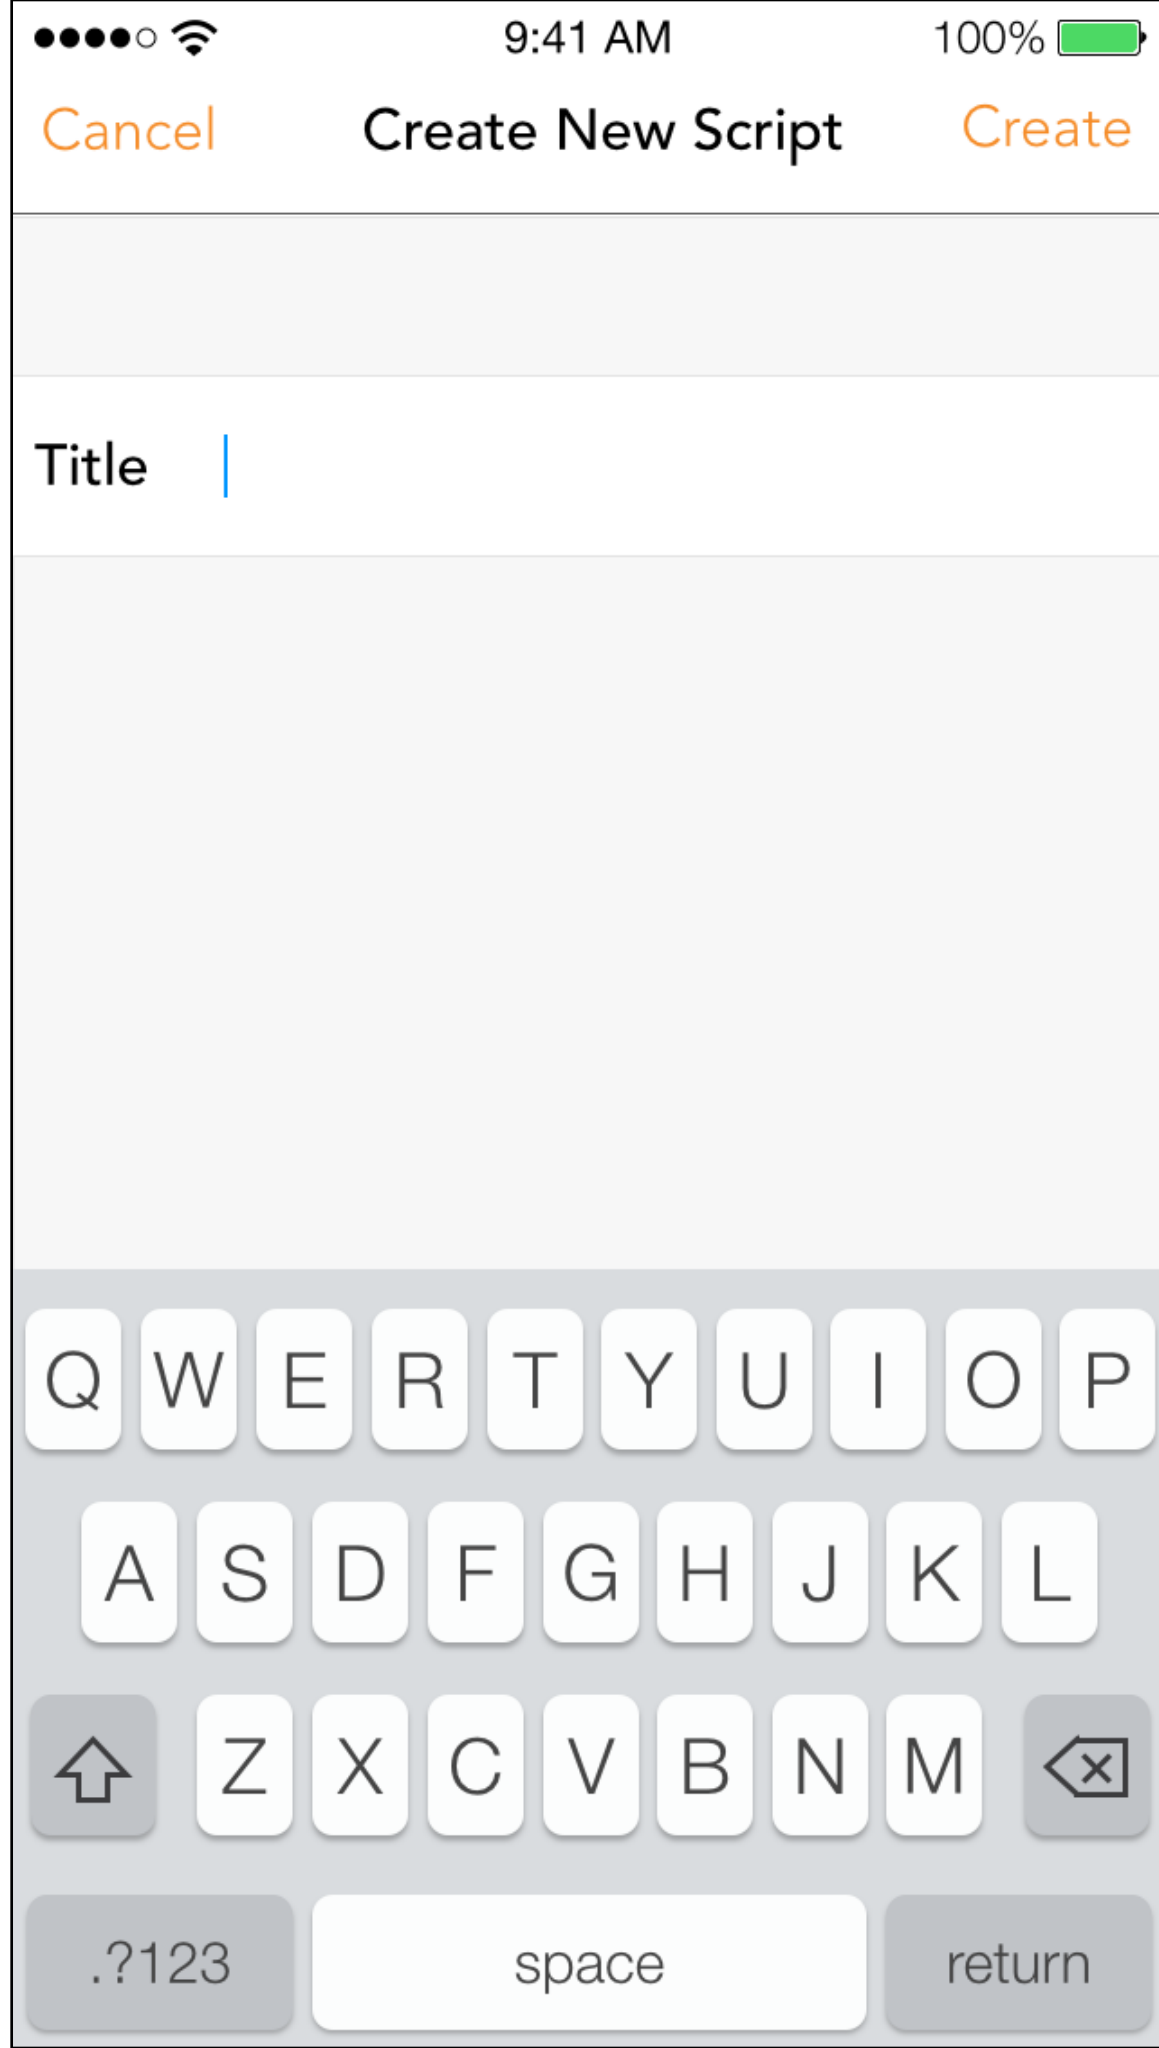

NAME NEW SCRIPT
When creating a new script, you are first asked to name the script.

NAME NEW NOTECARD
When creating a new notecard, you are first asked to name the notecard.

PR■MPTSMART

ENTER SCRIPT TEXT
After naming a new script you
can enter the text.
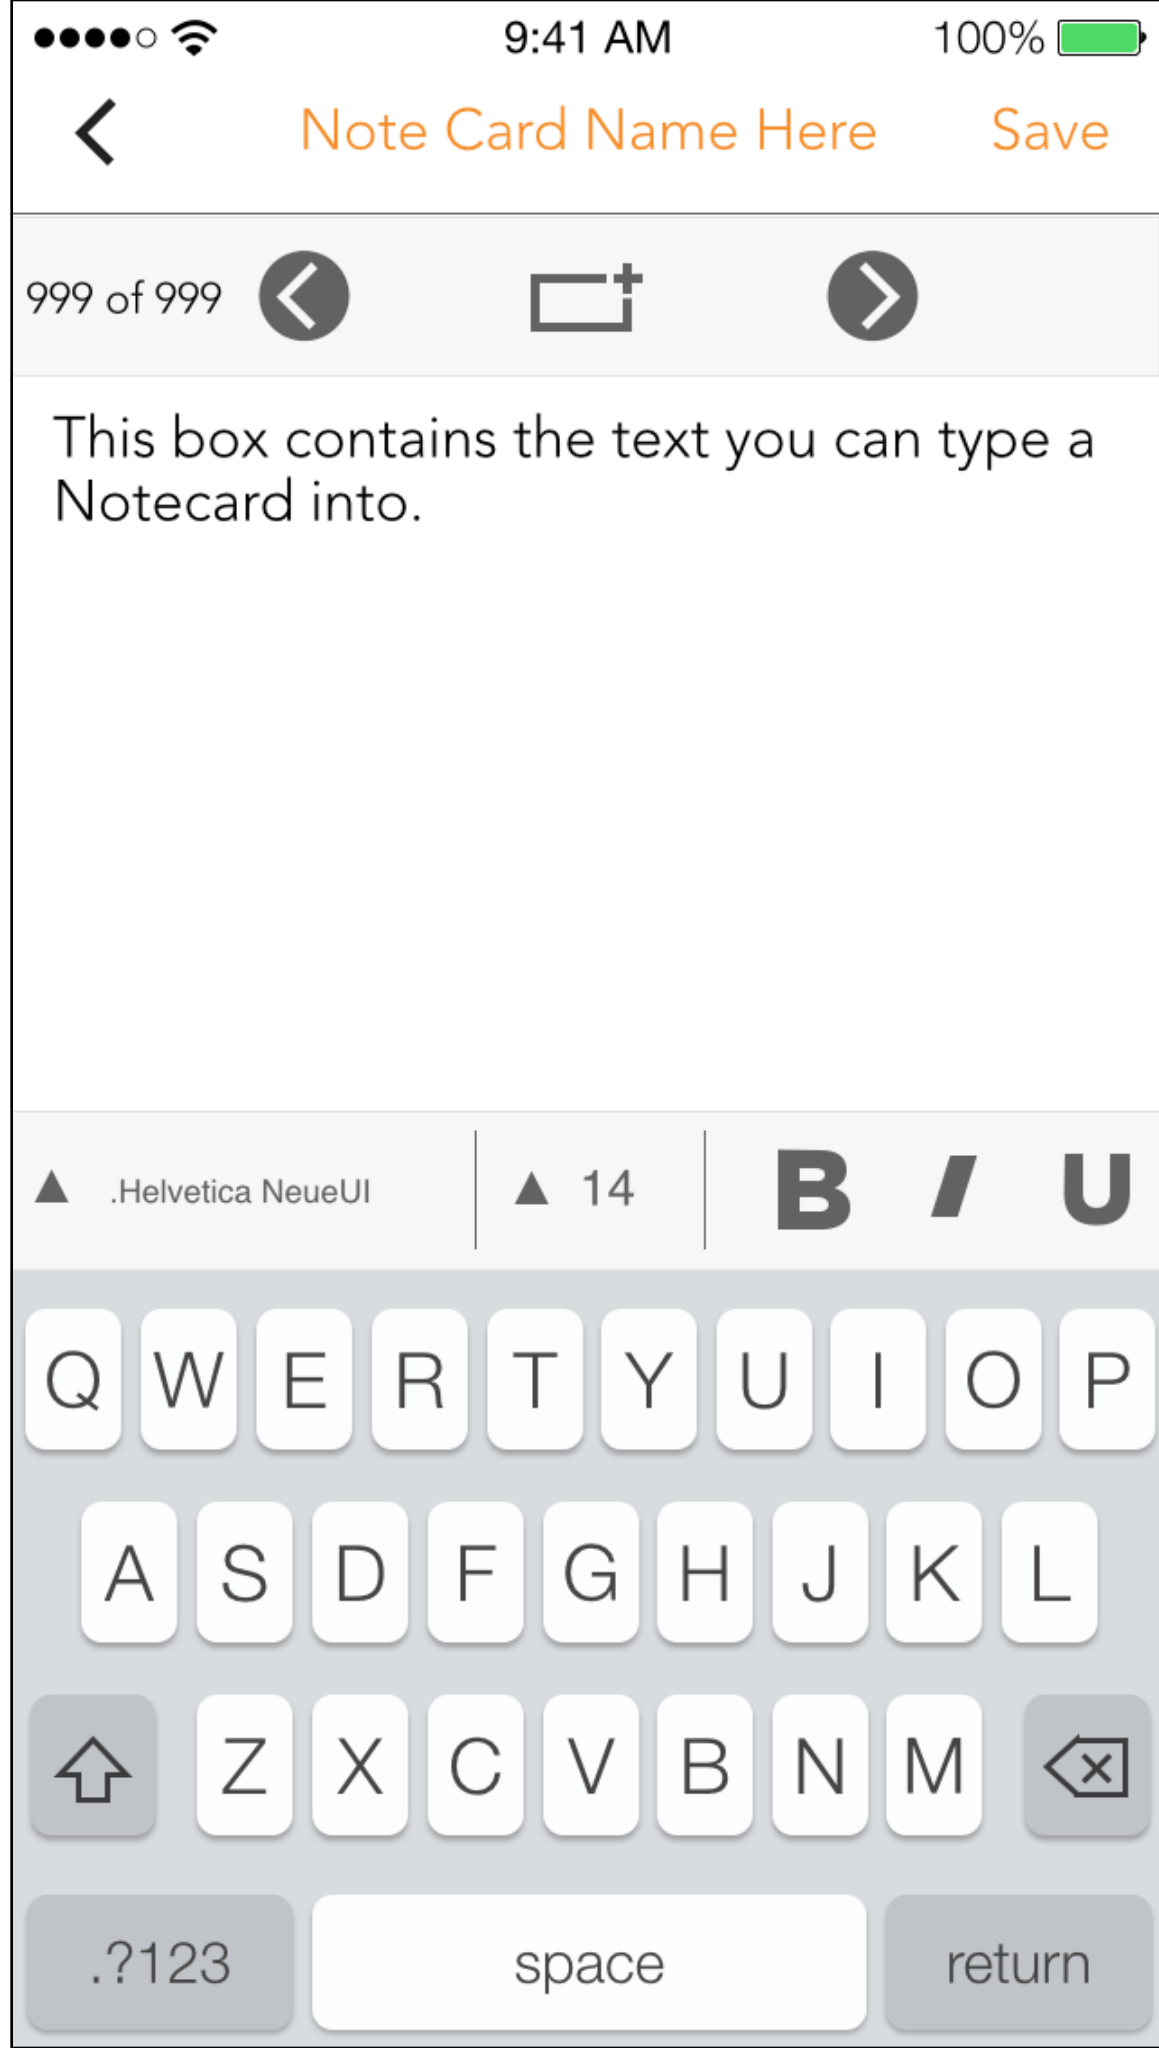

ENTER NOTECARD TEXT

After naming a new Notecard you can enter the text.

The arrow buttons allow you to page through the notecard. The New Notecard button (in the middle) will insert a new notecard.

Note, we are using a prebuilt system for RTF text, what I drew is an approximation of their UI.
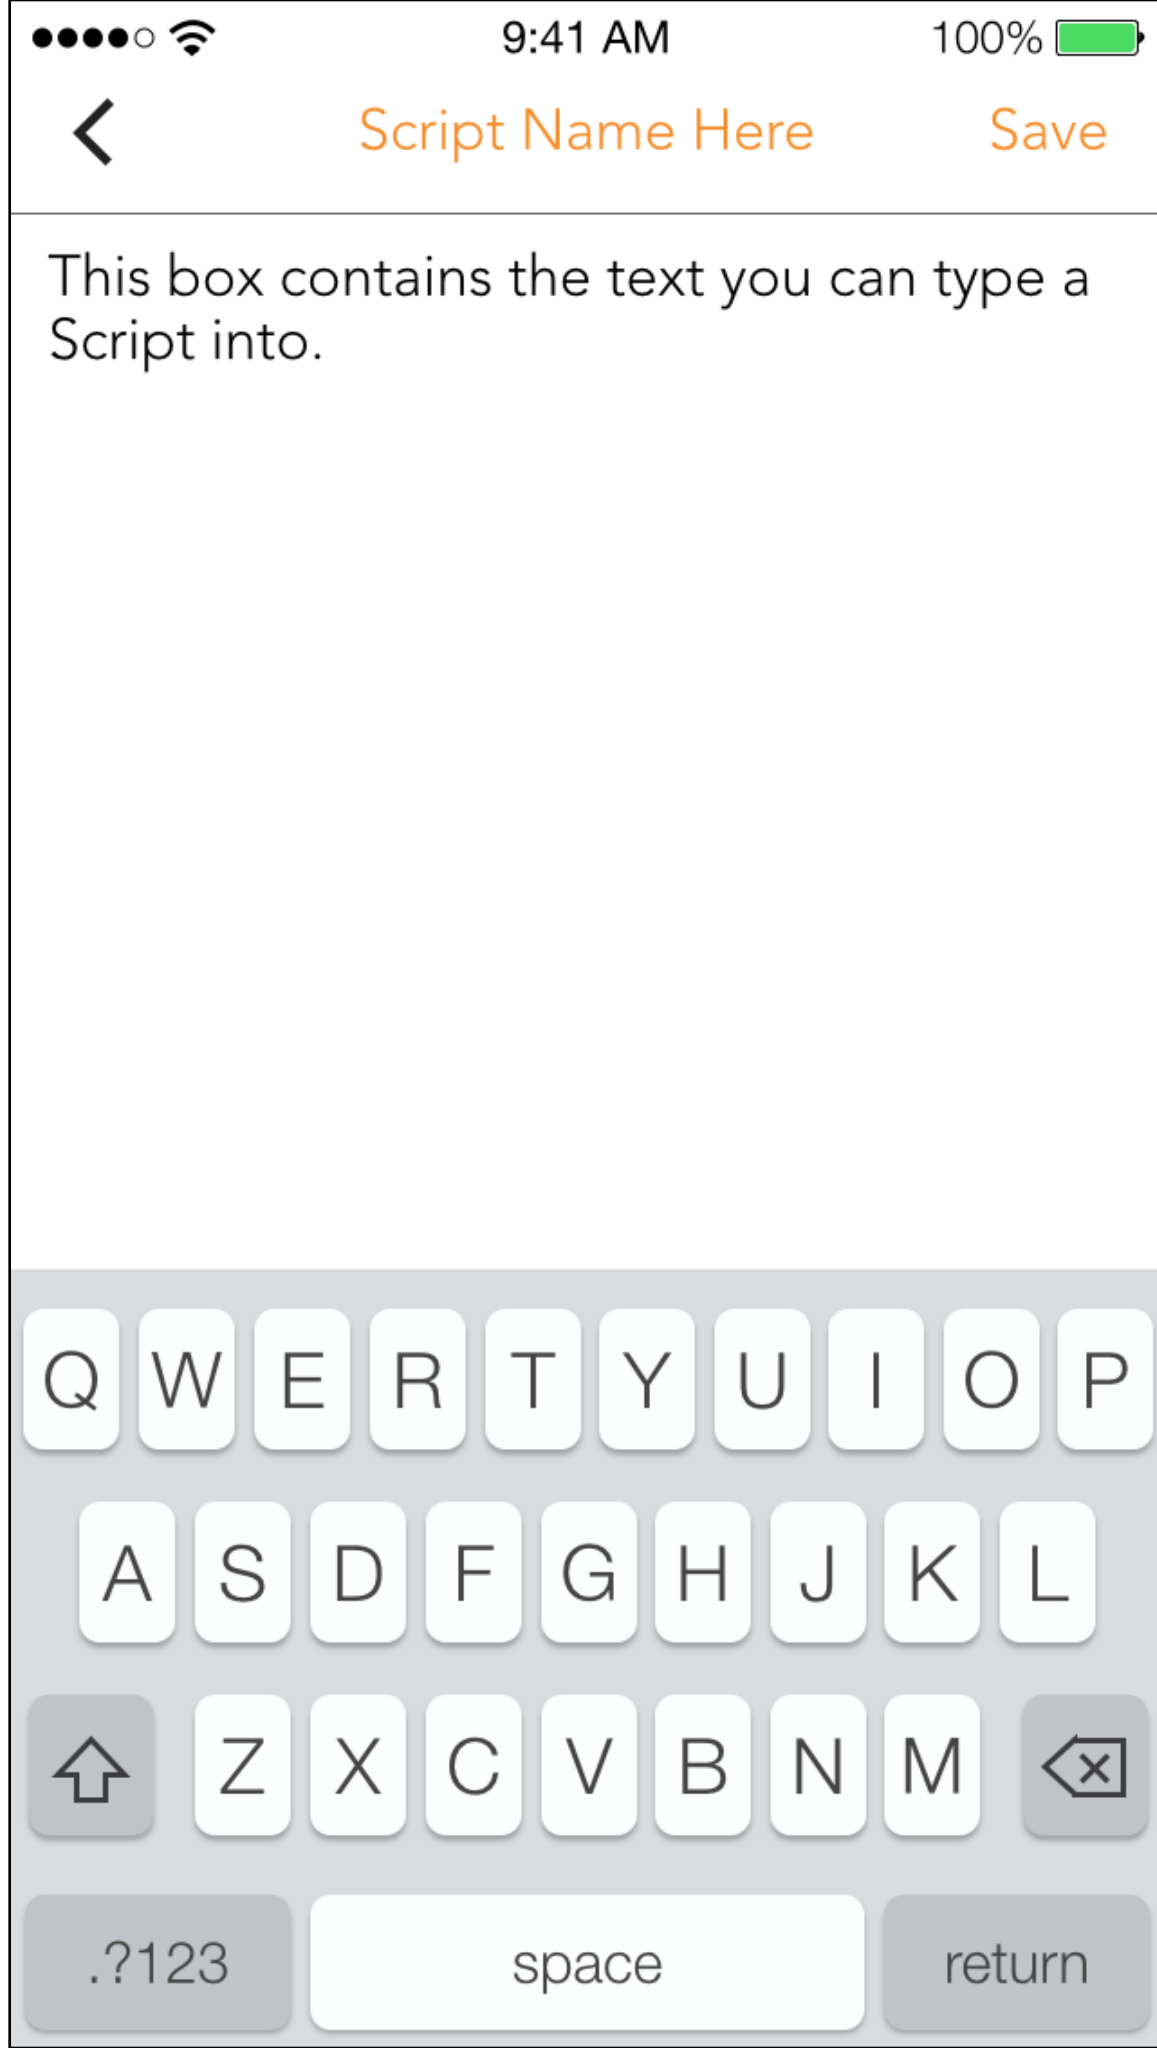

EDITING EXISTING SCRIPT
This is editing an existing script, this process is the same for an imported document, or a script created entirely on device.
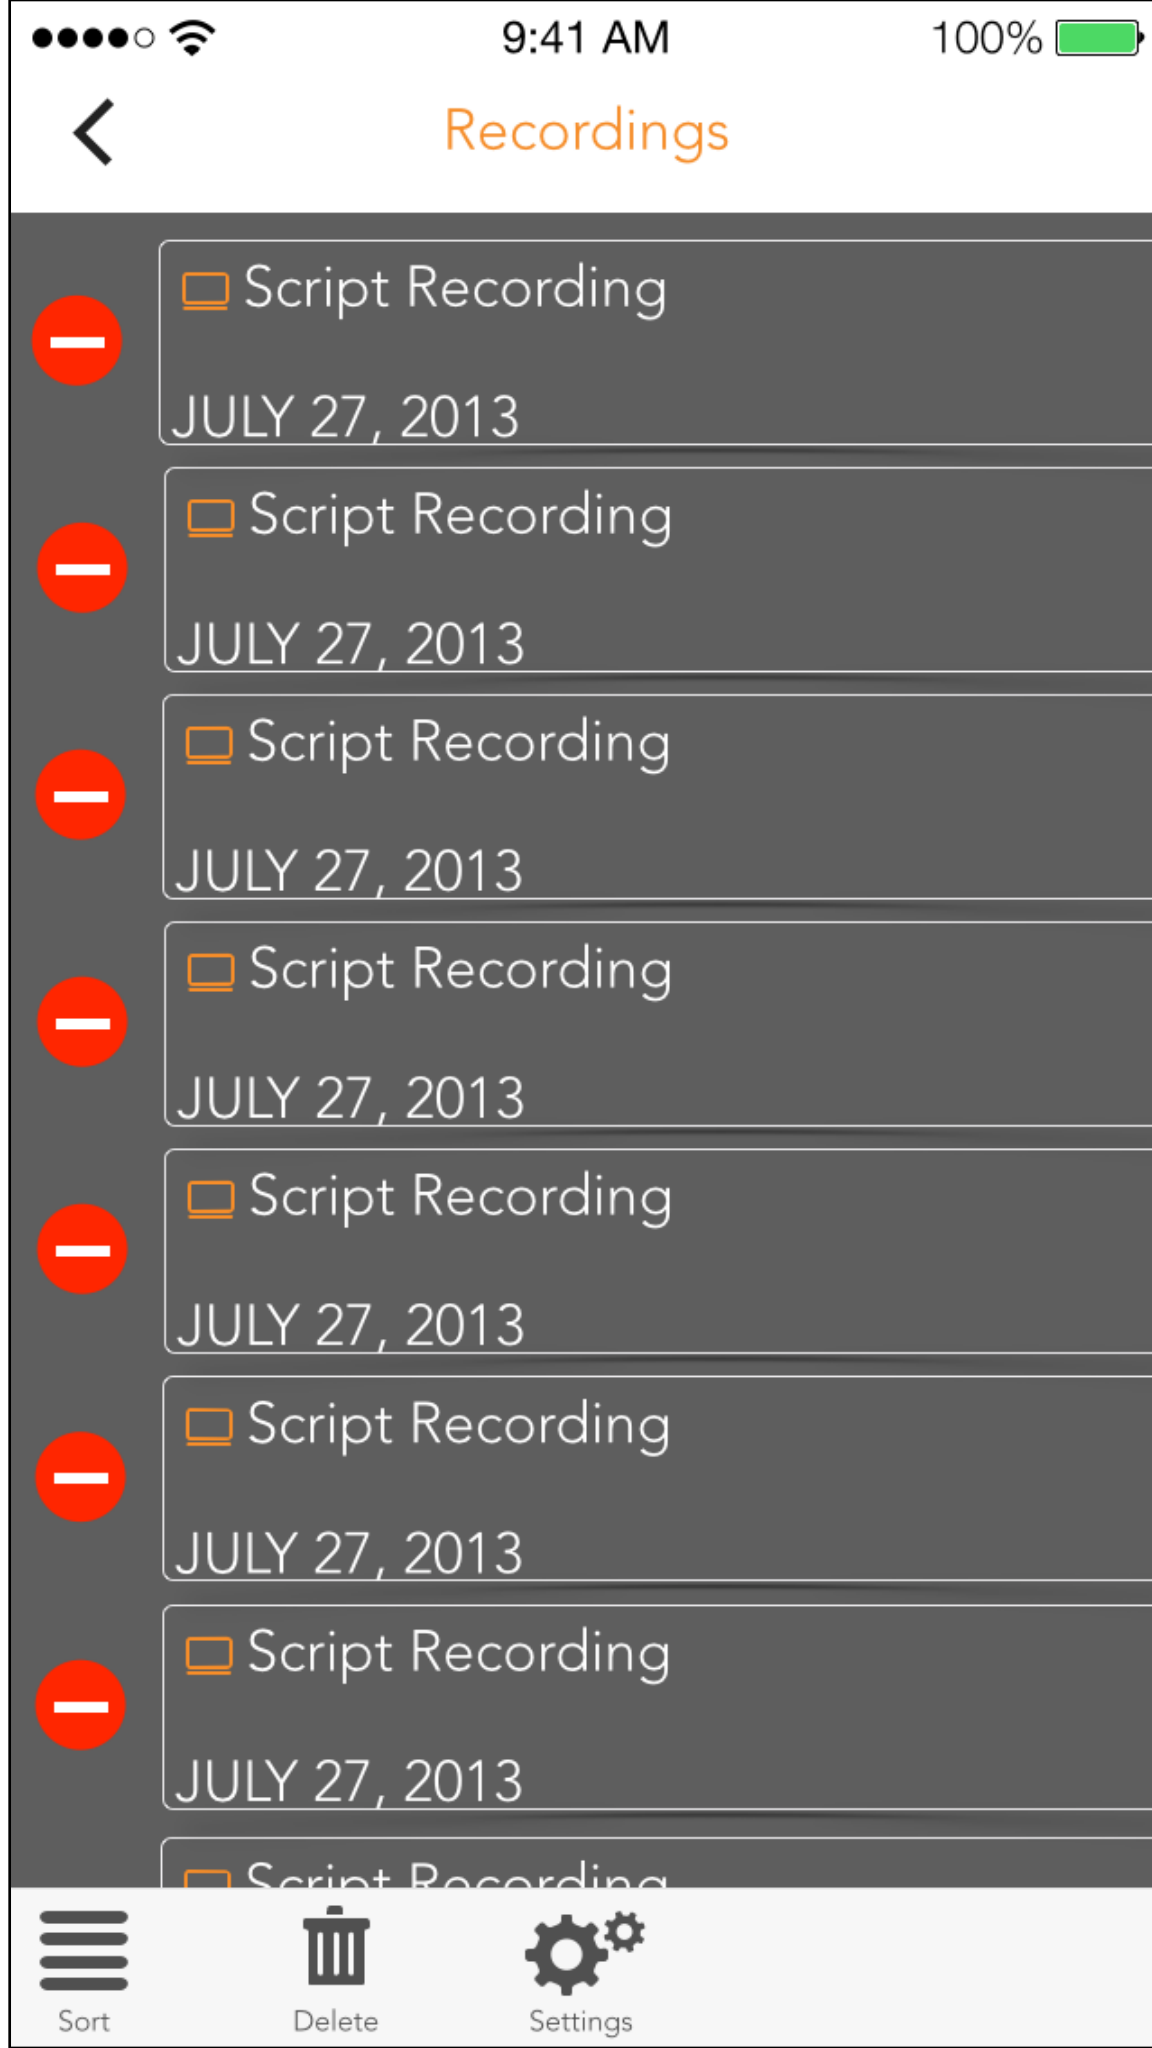

LIST ALL RECORDINGS
Pressing the Recordings button will bring up a full list of all recordings of Scripts and Notecards.
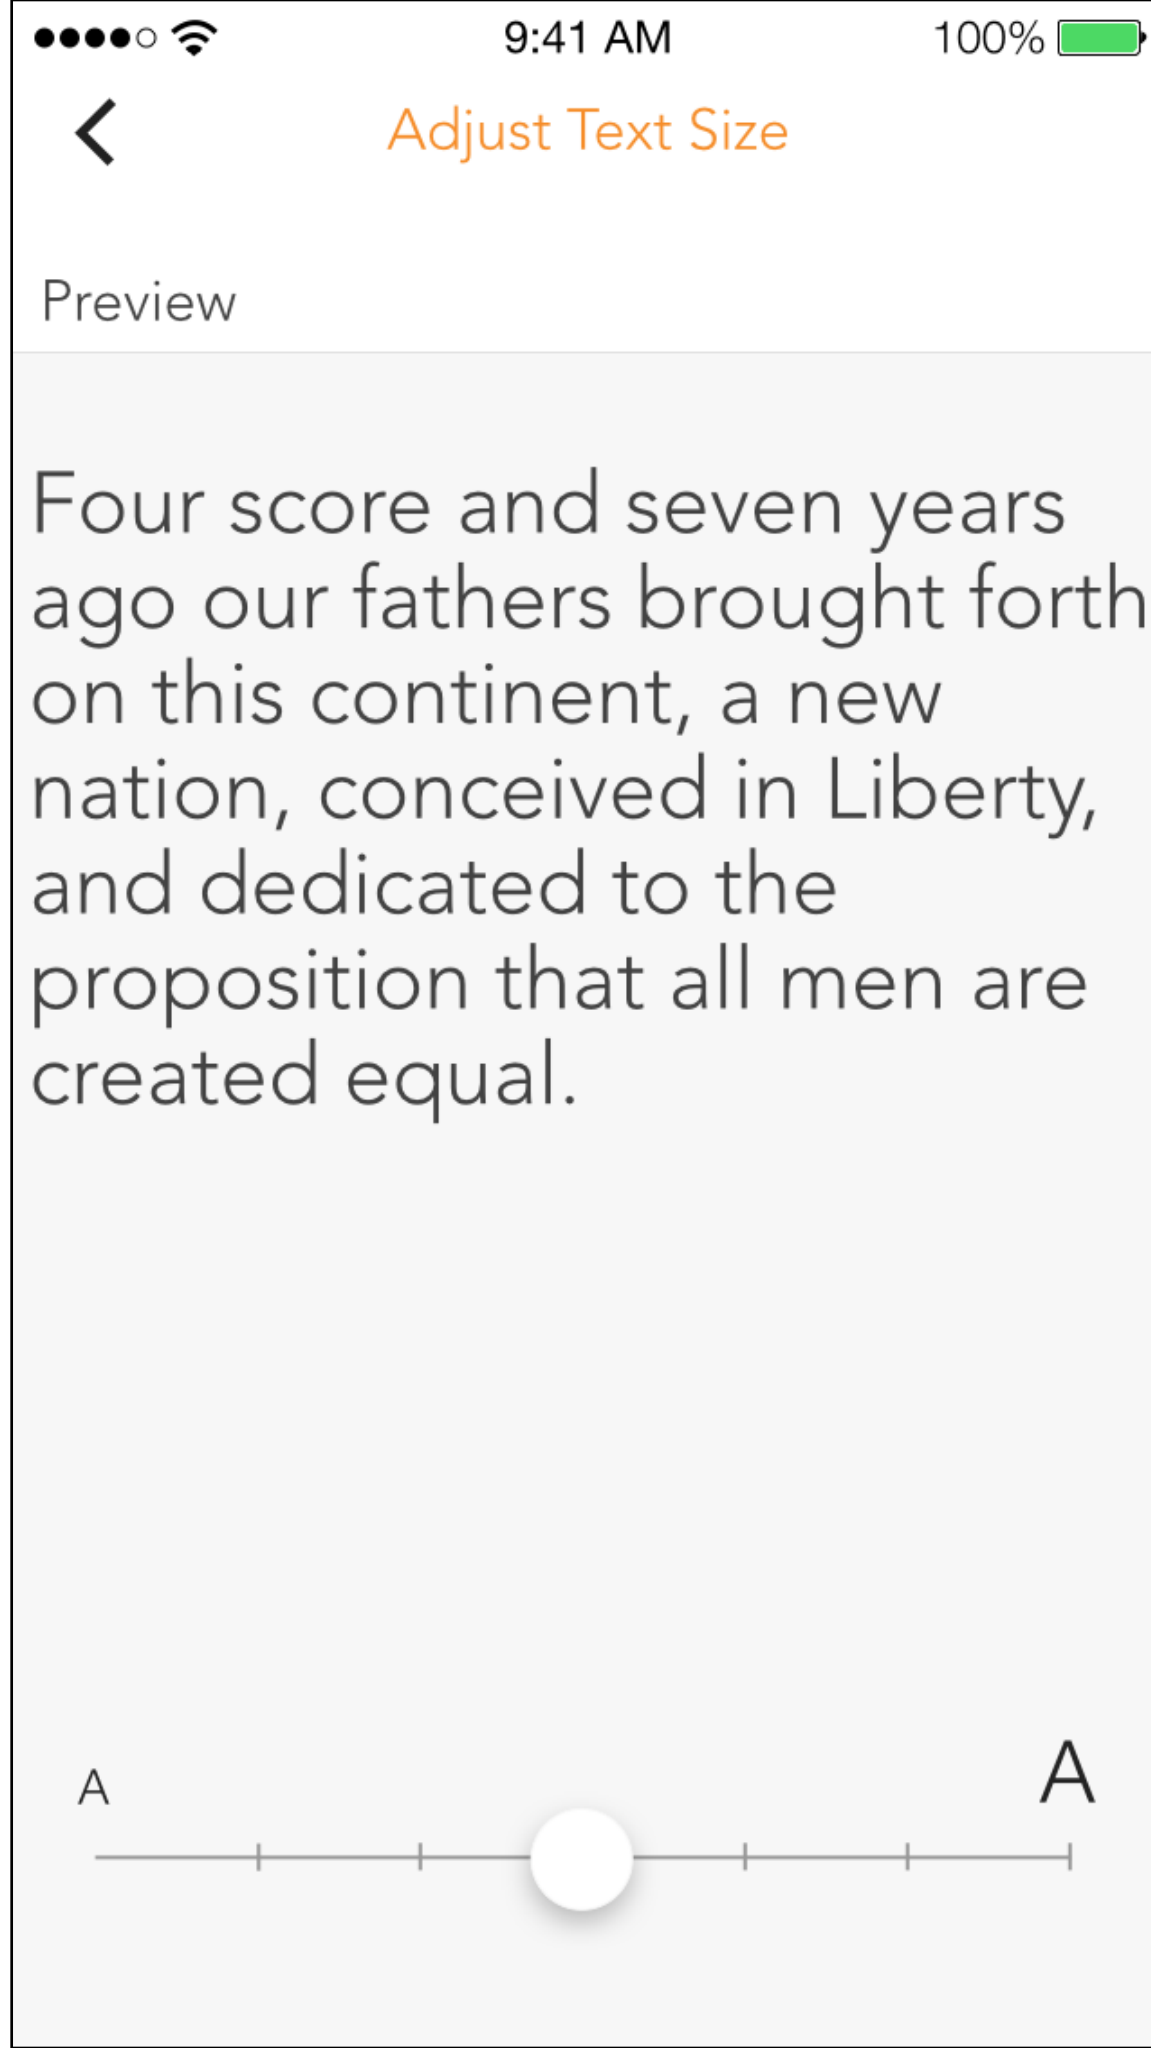

RECORDING OPTIONS
Swipe on a recording from the Right to the Left to slide the view to the right and expose Options to Share or Delete the recording.

BULK DELETE
Tapping on the Delete button brings up the options to select multiple recordings for deletion.

ADJUST TEXT SIZE
This view gives a preview of the text, with a slider that will increase and decrease the text size.
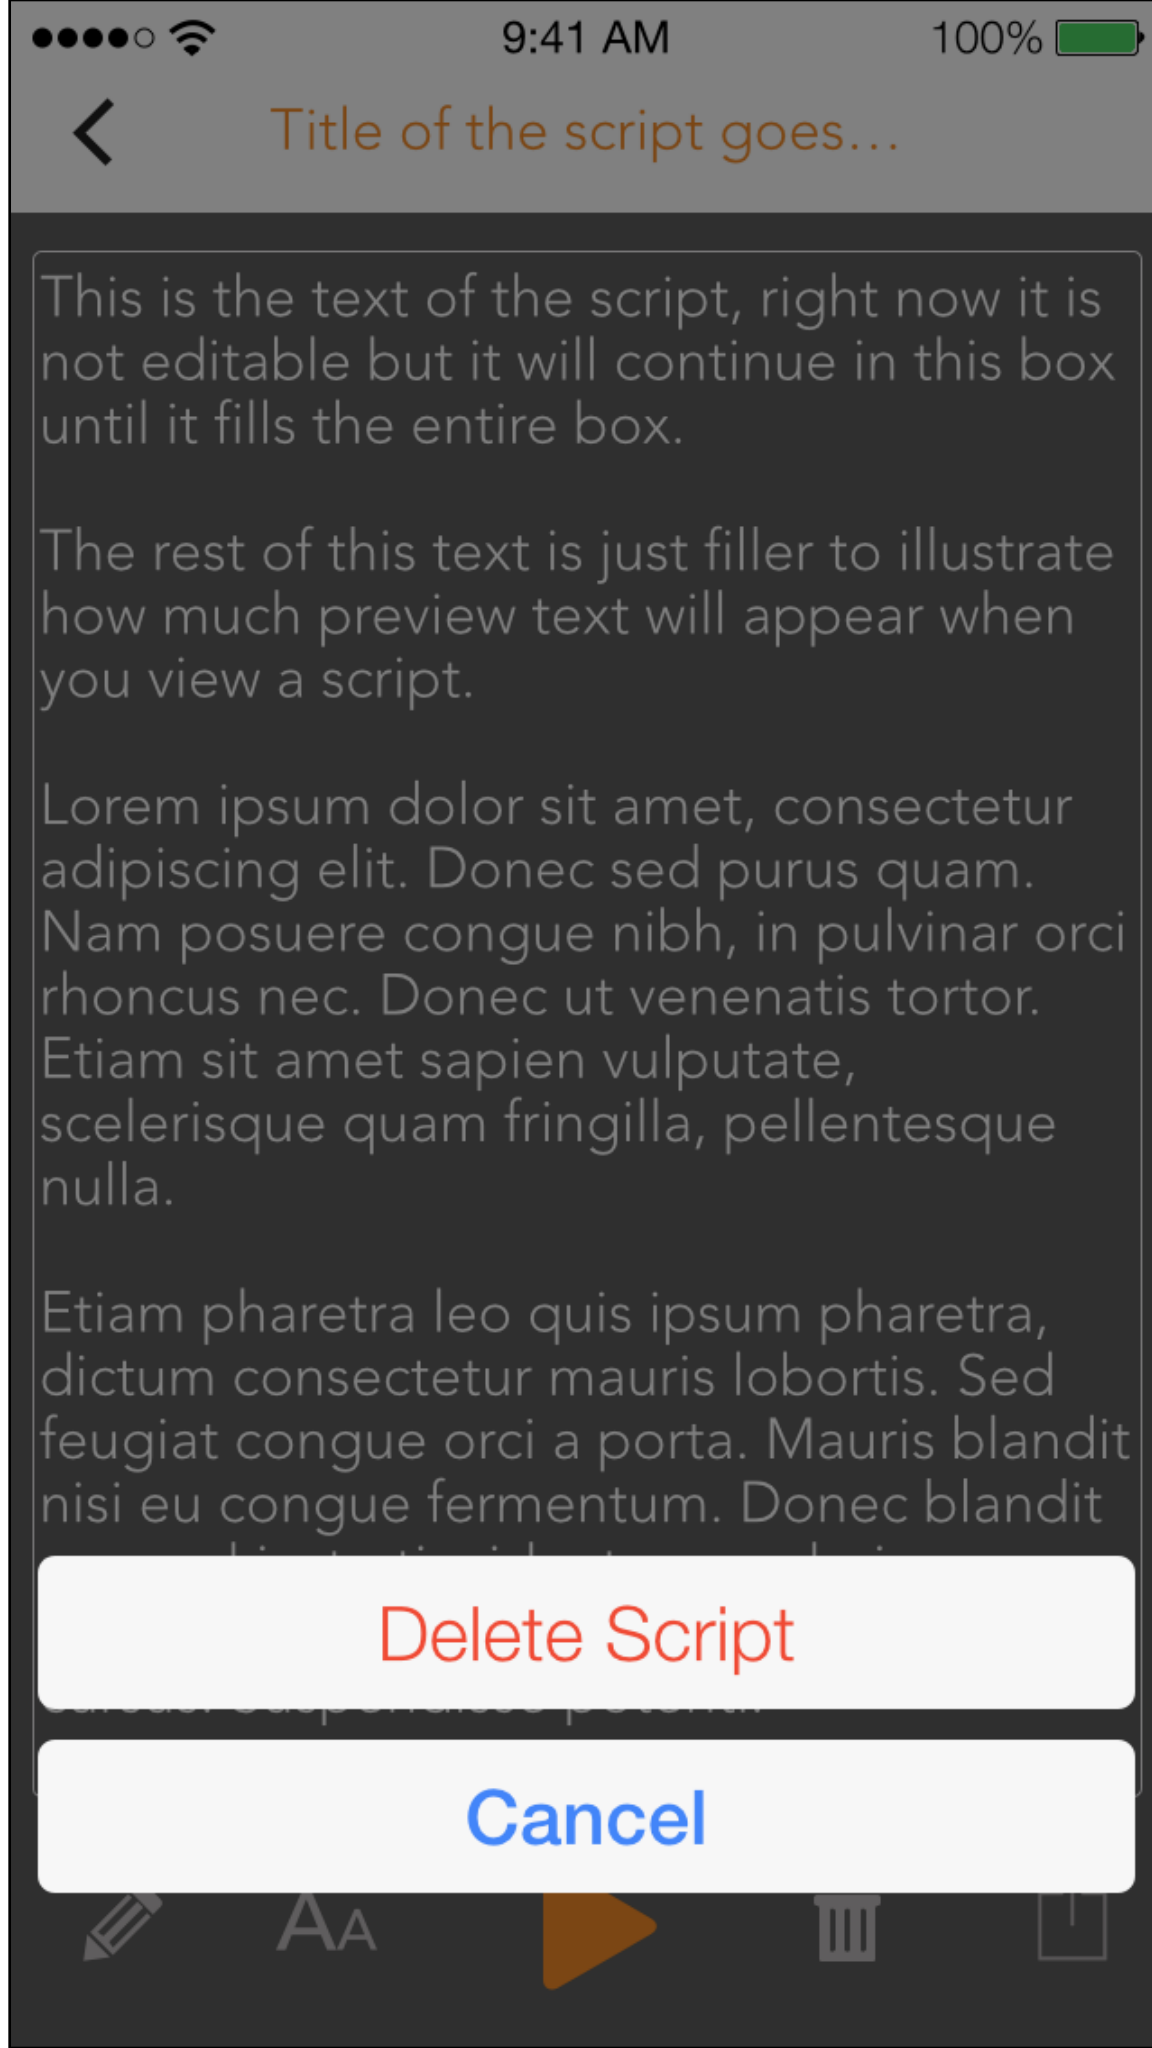

ADJUST SCROLL SPEED
Brings up a control to select scroll speed.

DELETE SCRIPT/NOTECARD
Buttons come up from the bottom on deleting a script or notecard.

Note: This is an older view, but I'm including it, as I think we will have times where this view is needed.
